

CSS Master

@raju_webdev

Part-1

This is the Part-1 from our 'CSS Master' Series. And in this part we will learn about:

- What is CSS?
- Why CSS?
- How to add CSS in HTML?

if you want to get
my free PDF then
don't miss end...

What is CSS?

- CSS is a language that we use to style an HTML document.
- It describes how elements will be displayed.
- CSS stands for Cascading Style Sheets.
- CSS files are stored with .css extension.
- CSS files can be used in three ways Inline CSS, Internal CSS and External CSS.

let's see why use
CSS

Why CSS?

- CSS saves a lot of time and work.
- Using CSS we can apply write once use many times approach.
- We can easily change the style of multiple elements by changing the style in the stylesheet.
- We can create single style sheet and can use on multiple HTML documents.
- It is used to design the layout of HTML document.

let's learn the
structure of
HTML document.

How to add CSS in HTML?

- We can add CSS in three ways: Inline CSS, Internal CSS and External CSS
- Inline CSS written in the opening tag in HTML by using **style** attribute.
- Internal CSS is written in the head tag of HTML by using style tag.
- External CSS is written in the external file with **.css** extension.
- It is used to display the data or content on the web browser.

In next post we will learn CSS syntax, using CSS and more.
