

# FORM IN HTML

@raju\_webdev

# Part-8

This is the Part-8 of our '**HTML Simplified**' series, and today we will learn about:

- HTML Form
- Form Attributes
- What HTML Form Contains?

let's learn  
HTML from

# HTML Form

- Form is a collection of input tags in a HTML document.
- Mainly forms are used to take the data from the user to serve on the server.
- Forms are created using `<form>` tag.

## Form Attributes

- **action:** This attribute specifies what action will be taken after submitting the form.
- **target:** This specifies on which browser tab the response will be displayed after form submission.
- **method:** This attribute is used to define the HTTP method used to submit the form.

Let's learn more  
about HTML form...

# What a Form Contains

**<input>**

**<label>**

**<select>**

**<option>**

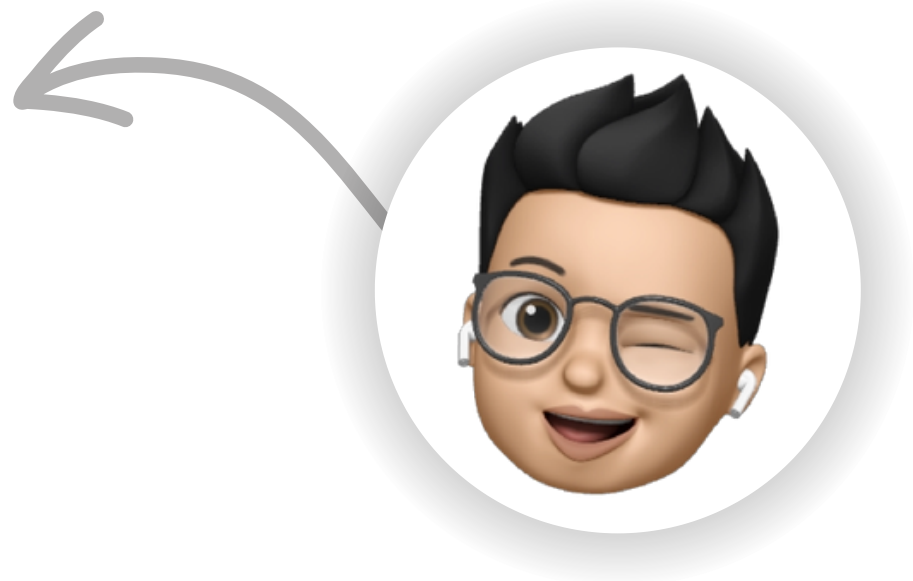

**<textarea>**

**<button>**

We will learn about  
these in upcoming  
posts...

Now, let's try to  
create a simple  
HTML form

## Simple Form Example:

```
<form action="/index.php" target="_blank" method="get">  
  Name: <input type="text">  
  Last Name: <input type="text">  
  <button type="submit">Submit</button>  
</form>
```

## Output:

Name:  Last Name:
