

ID & CLASS IN HTML

@raju_webdev

Part-16

This is the Part-16 of our '**HTML Simplified**' series, and today we will learn about:

- What is id in HTML?
- What is class in HTML?

if you want to get
my free PDF then
don't miss end...

Id

- Id is used to specify a unique id for an HTML element.
- We cannot add a single id to the multiple HTML elements.
- Id for an HTML element will be unique in the entire HTML document.
- Id is specified using **id** attribute in the HTML element.

Example:

```
<!DOCTYPE html>
<html>
<head>
  <title> Id in HTML - HTML Simplified Series </title>
</head>
<style>
  #webID {
    color: orangered;
  }
</style>
<body>

  <h1 id="webID"> Geeks Help</h1>

</body>
</html>
```

Uses of Id

- In stylesheet it is used to target the specific element.
- Used to access the element in JavaScript.
- Used to jump on the specific section on our Webpage
- In CSS elements with id is accessed using (#) hash.

Now it's time to
learn classes in
HTML...

Classes

- class is used to target the multiple elements from the HTML document.
- We can add the same class to the multiple elements.
- One elements can one or more than one classes.

Example:

```
<!DOCTYPE html>
<html>
<head>
  <title> Class in HTML - HTML Simplified Series </title>
</head>
<style>
  .myPara {
    color: green;
  }
</style>
<body>

  <p class="myPara"> This is first paragraph </p>
  <p class="myPara"> This is second paragraph </p>

</body>
</html>
```

outputs and free
PDF.

Uses of class

- It is used when we want to add the same style on multiple elements with CSS.
- Also in JavaScript classes are used to access multiple elements.
- In CSS elements with class are accessed using (.) dot.
