

Multimedia Tags in HTML

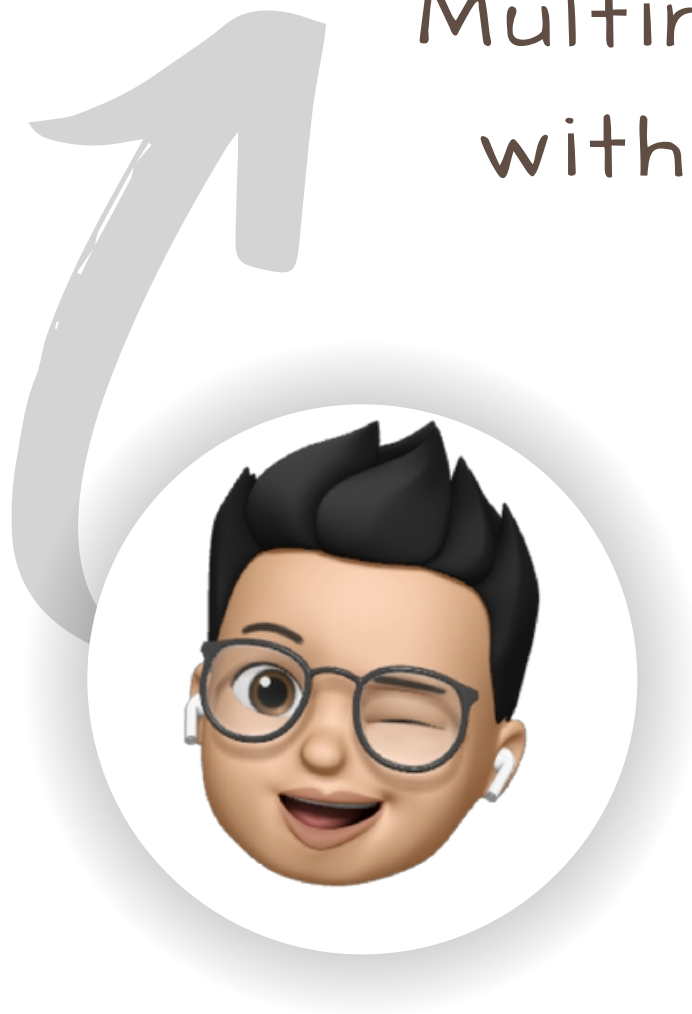

@raju_webdev

Part-6

This is the Part-6 of our '**HTML Simplified**' series and today we will learn about:

- Multimedia Tags in HTML
- How to use Multimedia Tags in HTML.

We will learn HTML
Multimedia tags
with example...

Multimedia Tags

- Multimedia Tags are used to show multimedia files on a web page.
- Media files contain multimedia elements such as audio and video.

Audio

`<audio>` element is used to play an audio file on a web page.

```
<audio controls>
  <source src="myMusic.mp3" type="audio/ogg">
  Audio Cannot play on your device
</audio>
```

Audio Attributes

- **autoplay:** This will start the audio file automatically.
- **controls:** It will add the video controls like play, pause, and volume controls.
- **muted:** This attribute will mute the audio file.

Video

<audio> element is used to show video on a web page.

```
<video width="320" height="240" controls>
  <source src="video.mp4" type="video/mp4">
  Your browser does not support the video tag.
</video>
```

Video Attributes

- **autoplay:** This will start the audio file automatically.
- **controls:** It will add the video controls like play, pause, and volume controls.
- **muted:** This attribute will mute the audio file.
- **width:** This attribute is used to add width to the video.
- **height:** This attribute is used to add height to the video.

Object

<object> tag is used to add an external object, multimedia files like audio, images, pdf, flash, video, and other webpages on our webpage.

```
<object data="video.mp4" width="25%" height="auto">  
  Visit Geeks Help  
</object>
```

Object Attributes

- **data:** It is used to specify the URL of the resource used in the object.
- **width:** This attribute is used to add width to the video.
- **height:** This attribute is used to add height to the video.

Embed

`<embed>` element is used to embed the files like audio, video, and HTML Document on the web page.

```
<embed width="20%" height="auto" src="video.mp4">
```

Object Attributes

- **src:** This is used for the source file.
- **width:** This attribute is used to add width to the video.
- **height:** This attribute is used to add height to the video.
