

TEXT FORMATTING IN HTML

@raju_webdev

Hlo dear,

Today in this part of our '**HTML Simplified**' Series we will learn text-formatting tags in HTML...

I have a surprise for you so must read the complete content carefully...

Text Formatting

- Text formatting tags are used to format the text of HTML documents.
- These are mainly used to display the text in a special type.

○ Bold

- `` tag is used to bold the text

```
<b>This is bold text</b>
```

○ Strong

- `` tag is also used to bold but it used to give more importance to the text.

```
<strong> This is special strong text </strong>
```

○ Italic

- `<i>` tag is used to italic the text.

```
<i> This is an italic text </i>
```

○ **Emphasized**

- `` defines the emphasized text.

```
● ● ●  
<em> This is empphasized text </em>
```

○ **Underline**

- `<u>` is used to under-line the text.

```
● ● ●  
<u> This is underline text </u>
```

○ **Delete**

- `` tag is used to define the deleted text.

```
● ● ●  
<p>In paragraph <del>is deleted</del></p>
```

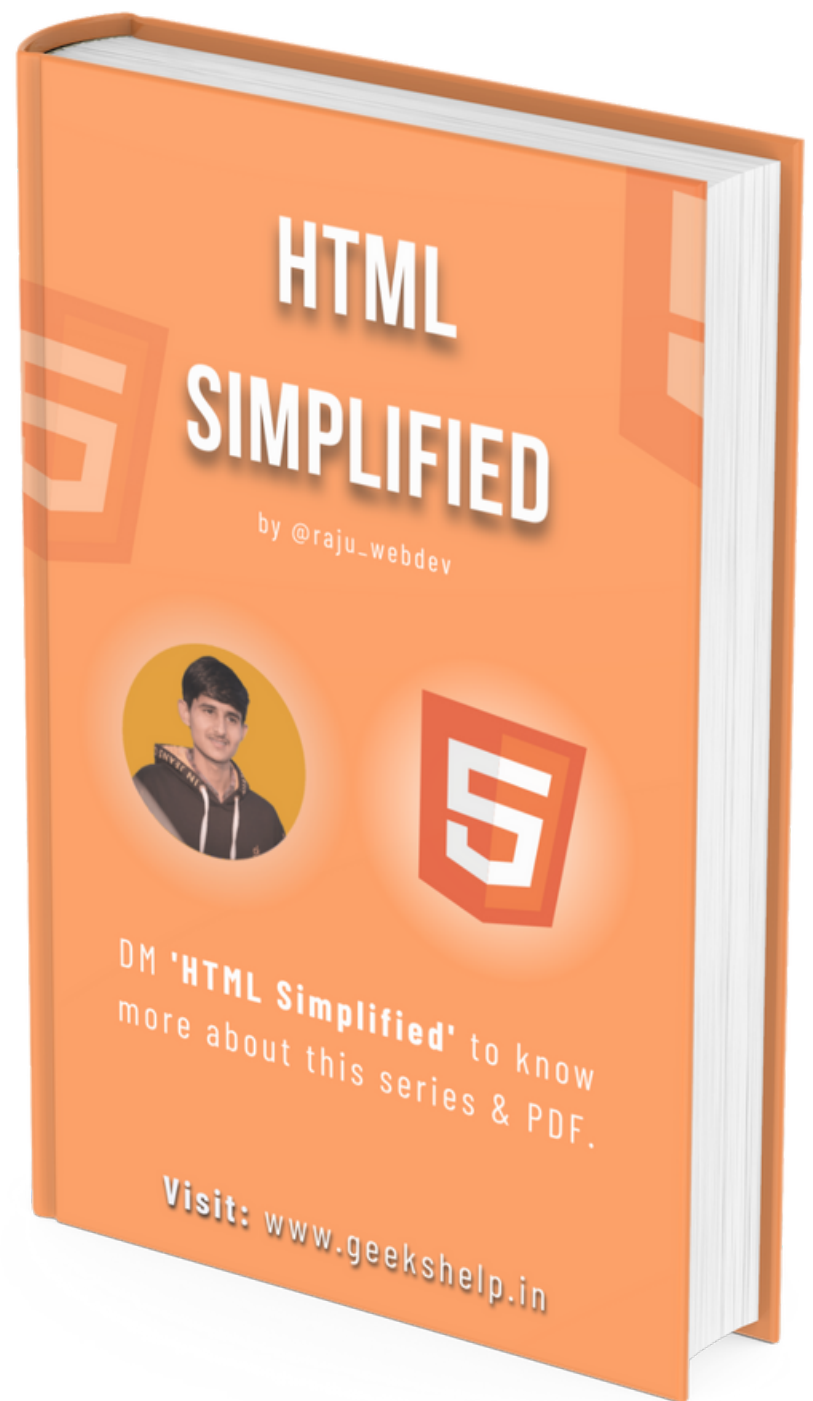

○ **Insert**

- `<ins>` defines a text that has been inserted into the document.

```
● ● ●  
<ins> This is an inserted text </ins>
```
