

Backgrounds in CSS

@raju_webdev

Part-6

This is the Part-6 from our 'CSS Master' Series. And in this part we will learn about:

- What are backgrounds in CSS?
- Different background properties.
- Adding backgrounds.

What are background?

- As the name suggests backgrounds are used to add background effects to the HTML elements.
- Using CSS backgrounds we can add background images, background colors on the HTML elements.
- In today's post, we will see how we can add backgrounds and the different background properties.

let's see how to
add backgrounds...

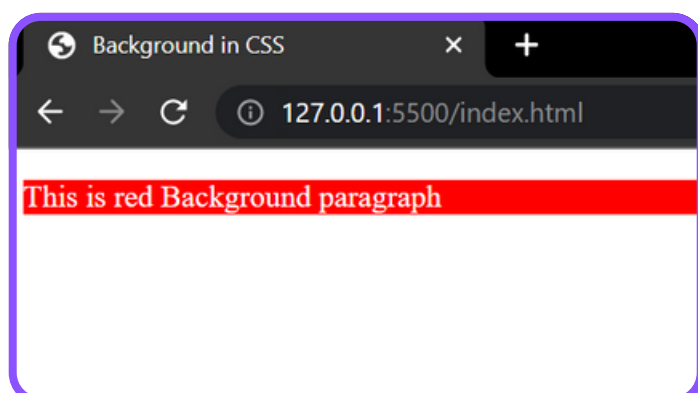

Background Color

- We can simply add background color by color name, hex value or rgb value.
- In this we can use predefined color names like: red, green, blue, purple, orange, etc.

Example:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title> Backgrounds in CSS</title>
  <style>
    .bg-red{
      background-color: red;
      color: white;
    }
  </style>
</head>
<body>
  <p class="bg-red"> This is red Background paragraph. </p>
</body>
</html>
```

Output:

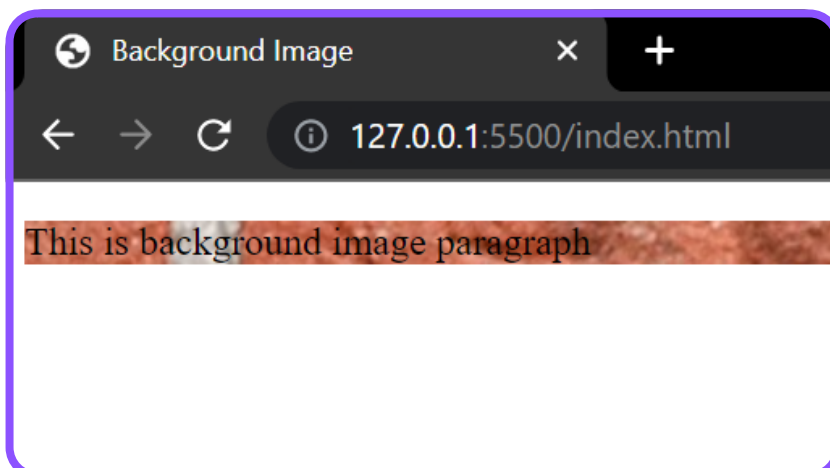

Background Image

- Like background color, we can also add images as a background.
- To set images as background we will use the **background-image** property.

Example:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title> Background Image </title>
  <style>
    p {
      background-image: url("background.jpg");
    }
  </style>
</head>
<body>
  <p> This is background image paragraph</p>
</body>
</html>
```

Output:

Background Properties

- **background-position**

background-position is used to set the position of background.

- **background-repeat:**

This property is used to set the background repetition.

- **background-size**

It is used to set the size of the background.

- **background-attachment**

This property is used to sets whether a background image's position is fixed within the viewport.

- **background-origin**

The background-origin property specifies the origin position of the background.

Background Shorthand

```
background: #fafafa url('background.jpg') no-repeat right top;
```

Example:

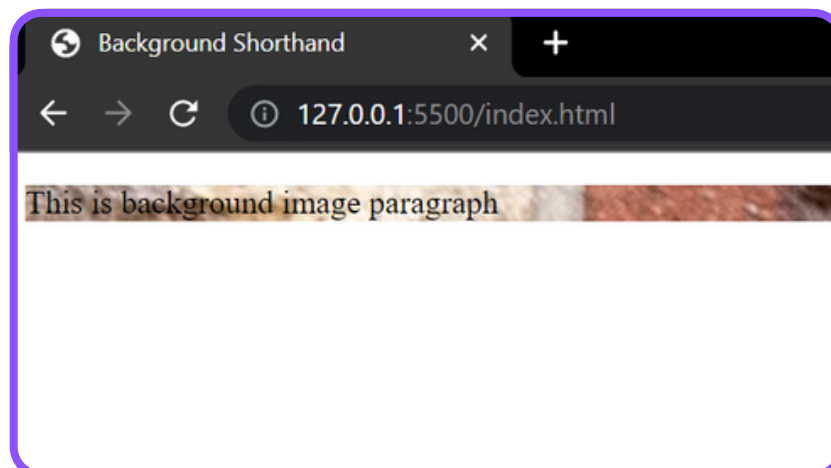

```
<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title> Background Shorthand </title>
  <style>
    p {
      background: #fafafa url('background.jpg') no-repeat right top;
    }
  </style>
</head>
<body>
  <p> This is background image paragraph </p>
</body>

</html>
```
