Lists

— Lists are used to group the items in a list.

— In HTML list are: Ordered List, Unordered List, and Description Lists

— List items are created using <li> tag.

○ **Ordered Lists**

- Ordered List are created using <ol> tag.
- This type of lists show the data and information in given order.

○ **Unordered Lists**

- Unordered List are created using <ul> tag.
- This type of list represents the data without any specific order.

○ **Description Lists**

- This type of List represents elements in definition form like a dictionary.

Ordered Lists

○—○ Ordered List are created using <ol> tag.

○—○ This type of lists show the data and information in given order.

○—○ Types of ordered list are: 1, A, a, I, i

○ **Example**

```
<ol type="A">
    <li> HTML Simplified </li>
    <li> CSS Master </li>
    <li> JavaScript Doctory </li>
</ol>
```

visit www.geekshelp.in
for other <ol> list type...

Unordered Lists

⟋◦ Unordered List are created using <ul> tag.

⟋◦ This type of list represents the data without any specific order.

⟋◦ Type of ordered list are: disc, circle, square, none.

◦ **Example**

```html
<ul type="circle">
    <li> HTML Simplified </li>
    <li> CSS Master </li>
    <li> JavaScript Doctory </li>
</ul>
```

visit www.geekshelp.in
for other <ul> list type...

Description Lists

- It is used to represent elements in definition form like a dictionary.
- <dl> tag defines the description list, <dt> tag defines the term, and the <dd> tag describes each term in
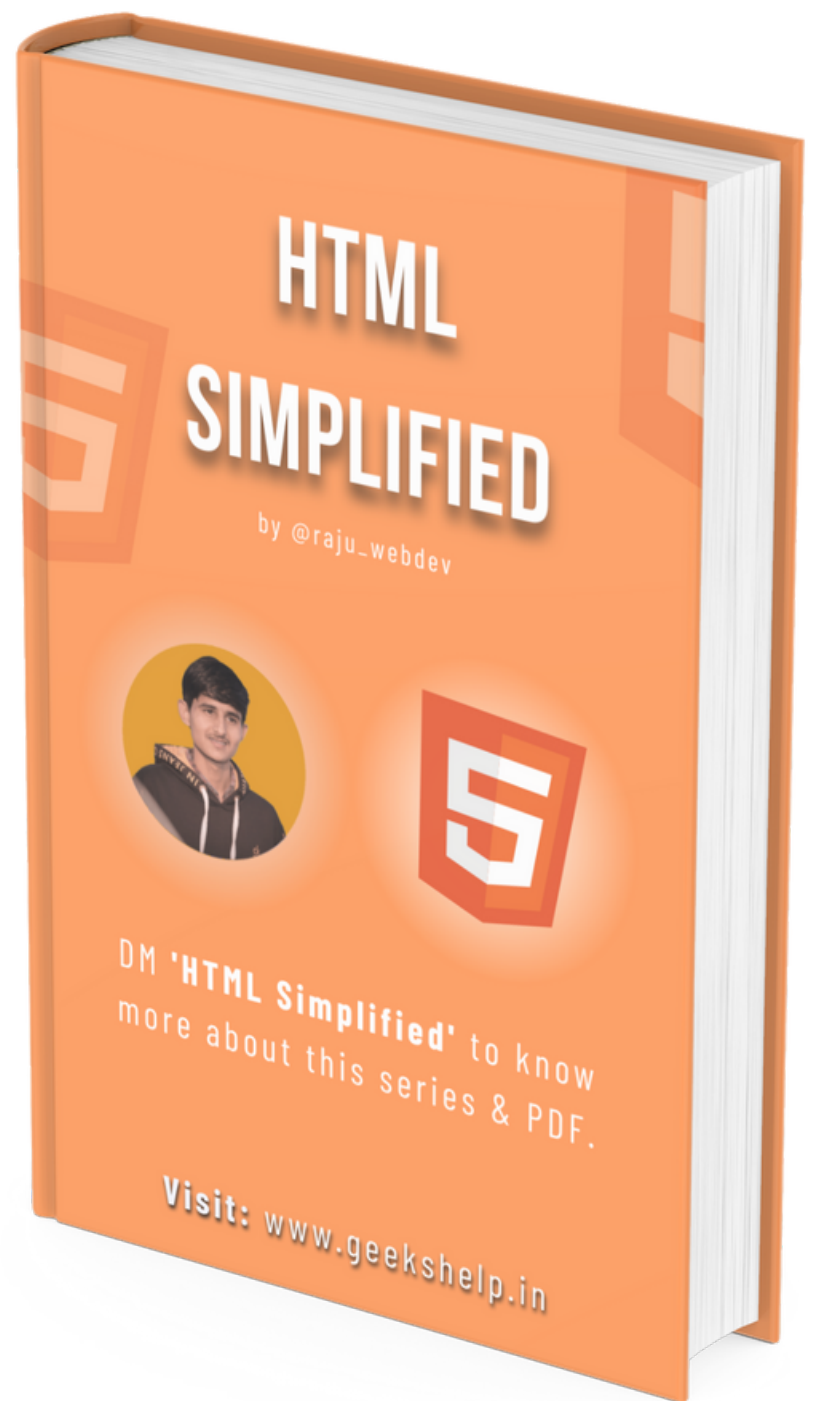

○ **Example**

```
<dl>
    <dt>HTML Simplified</dt>
        <dd> This is the complete series of HTML </dd>
    <dt> CSS Master </dt>
        <dd> This series will help you to master the CSS </dd>
</dl>
```
