FORM IN HTML

Part-8

This is the Part-8 of our **'HTML Simplified'** series, and today we will learn about:

- HTML Form

- Form Attributes

- What HTML Form Contains?

let's learn
HTML form

HTML Form

○ Form is a collection of input tags in a HTML document.

○ Mainly forms are used to take the data from the user to serve on the server.

○ Forms are created using <form> tag.

Form Attributes

- **action:** This attribute specifies what action will be taken after submitting the form.

- **target:** This specifies on which browser tab the response will be displayed after form submission.

- **method:** This attribute is used to define the HTTP method used to submit the form.

Let's learn more
about HTML form...

What a Form Contains
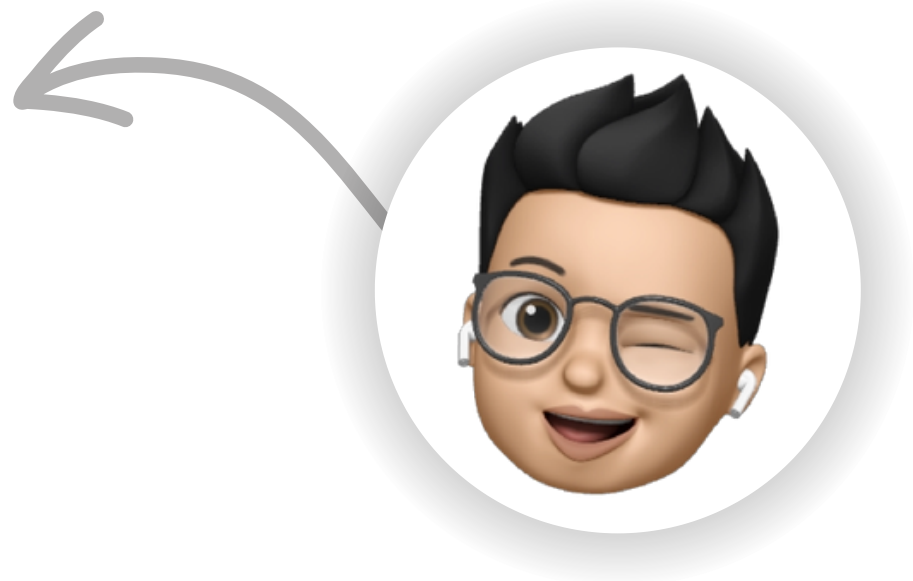

<input>

<label>

<select>

<option>

<textarea>

<button>

We will learn about these in upcoming posts...

Now, let's try to create a simple HTML form

Simple Form Example:

```html
<form action="/index.php" target="_blank" method="get">
    Name: <input type="text">
    Last Name: <input type="text">
    <button type="submit">Submit</button>
</form>
```

Output:

Name: [   ] Last Name: [   ] [Submit]
